

Contec® Prep Mat

Absorbent, dual layered pad for immediate spill cleanup

The conveniently-sized 16" x 21" (41 x 54 cm) Contec® Prep Mat helps to minimize the contamination introduced into the ISO Class 5 work area, unlike traditional pulp layer options that may contaminate the work area or influence the state of control. The latex-free fabric construction consists of two layers: an absorbent layer that helps contain occasional spills, and a barrier layer that prevents the spill from penetrating through to the work surface.

The Contec Prep Mat is a tool that helps protect pharmaceutical technicians when compounding, handling, and administering Compounding Preparations (CPs) and hazardous drugs. Ideal for use in nonsterile applications, including hazardous drug (HD) compounding, administering or as a drying mat for washed supplies. Available irradiated or non-irradiated.

Designed for use in pharmacy cleanrooms, Contec® Prep Mats are ideal for quick and easy spill control and cleanup.

Features	Benefits
Low particulate; lint-free construction	<ul style="list-style-type: none"> • Features better particles and fibers than common industry options which result in less contamination potential for ISO Class 5 work areas
Absorbent and barrier layers	<ul style="list-style-type: none"> • Great liquid capacity, without penetrating through mat to work surface • Ideal for powder containment
Ideal for nonsterile applications, including HD compounding	<ul style="list-style-type: none"> • Makes cleanup and spill control an easier process to manage
Lot number on inner bags	<ul style="list-style-type: none"> • Mats are completely traceable by lot
Available irradiated and non-irradiated	<ul style="list-style-type: none"> • Offers a flexible product mix based on required protocols

Part no.	Description	Packaging
HCPD0001	Contec Prep Mat	25 pads/inner bag, 6 inner bags/inner box, 4 inner boxes/case
HCPD0005	Contec Prep Mat, irradiated	25 pads/inner bag, 6 inner bags/inner box, 4 inner boxes/case

The 16" x 21" Contec Prep Mat is dual layered: a textured, absorbent layer for fast spill containment and a smooth barrier layer for work surface protection.
