

Biodegradable Toilet Wand

Sustainability meets functionality

Contec® Biodegradable Toilet Wand can be used and thrown away after every use to reduce cross-contamination while still containing materials that will decompose in the landfill at a much more efficient rate than plastics.

This product provides a biodegradable option for cleaning toilets in facilities that are focused on sustainability and green cleaning initiatives. The bamboo handle along with the coconut fiber scrubbing head provides a tool that is capable of decomposing and breaking down in the landfill in 10 years or less compared to its plastic counterpart that can last up to 1,000 years in similar settings. The coconut fiber head will allow for proper scrubbing and cleaning for the mechanical removal of debris that is contained inside the toilet.

Features

Can be used in numerous facility types

Safe on several different toilet materials like porcelain, stainless steel, or plastic

14" Long handle for user safety during cleaning

Contec® Biodegradable Toilet Wand was designed for cleaning professionals who work in environments where a need for sustainable products are needed without compromising on functionality. From public restrooms to private bathrooms the Contec Biodegradable Toilet Wand will support every facility in its pursuit of taking initiatives in a more green approach to cleaning.
